###The Code below is for developing a MLR model predicting an employee's monthly income. The linear regression model was built using the "MonthlyIncome" column as the response variable. Upsampling was not performed as values for "MonthlyIncome" are unique.

#Performing feature selection for our "MonthlyRate" column to determine what variables are significant at predicting Monthly Income.

```
set.seed(7)

library(caret)
control = trainControl(method="repeatedcv", number=10, repeats=1)
model = train(MonthlyRate~., data=Attrition, method="glmnet", preProcess="scale", trControl=control)
```
